Detailed Action

This application is a continuation of abandoned application 09/872,850.

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-5, drawn to a method for detecting a cancerous colon cell via probe binding level comparison, classified in class 435, subclass 6.
- II. Claims 6-8, drawn to a method for assessing the cancerous phenotype of a colon cell via expression level comparison, classified in class 702, subclass 19.
- III. Claims 9-12, drawn to a method for suppressing or inhibiting a cancerous phenotype of a cancerous cell, classified in class 435, subclass 325.
- IV. Claim 13, drawn to a method for assessing the tumor burden of a subject, classified in class 436, subclass 64.
- V. Claims 14-18, drawn to a method of identifying a gene product as a target for a cancer therapeutic, classified in class 435, subclass 7.1.
- VI. Claims 19-22, drawn to a method for identifying agents that decrease biological activity of a gene product, classified in class 424, subclass 9.2.

The inventions are distinct, each from the other because of the following reasons:

Although there are no provisions under the section for "Relationship of Inventions" in M.P.E.P. § 806.05 for inventive groups that are directed to different processes, restriction is deemed to be proper because these methods appear to constitute patentably distinct inventions

Art Unit: 1631

for the following reasons: Groups I-VI are directed to methods that recite structurally and functionally distinct elements, are not required one for the other, and/or achieve different goals. Group I requires the probe binding level comparison for colon cancer detection which is not required by any other Group. Group II requires comparison of gene product expression levels which differs from the other Groups. Group III requires introducing an antisense polynucleotide to inhibit expression of a gene product which is not required by any other Group. Group IV requires assessing tumor burden which is not required by any other Group. Group V requires identifying a target for a cancer therapeutic which is not required by any other Group. Group VI requires identifying agents that decrease biological activity of a gene product which is not required by any other Group. These distinct methods are often separately characterized and published in literature and would add undue search burden if they were all examined together. Thus, they are considered distinct invention types for restriction purposes.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement may be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the

Art Unit: 1631

application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
